

Dom Taing

(360)-769-3541 | dom.taing123@gmail.com | Bellevue, WA | [Portfolio](#)

Summary

- 8 years of experience building front-end applications using HTML5, CSS3, Javascript, Typescript, jQuery, React, Node.js, etc.
 - A thorough understanding of React and its related concepts such as functional and class components, Higher-Order components, custom hooks, lifecycles method, virtual DOM, and JSX.
 - Proficient with other front-end tools such as typescript for static typing and SASS to write clean and reusable CSS styles.
 - Expertise in client-side Node.js tools including Webpack, Babel, and testing tools such as Jest and React Testing Library.
 - Knowledgeable in the use of version control management systems such as Git.
 - Familiarity with popular development techniques such as Agile, Scrum.
 - Experienced with developing responsive and interactive web applications utilizing RESTful API and constructing web service APIs that adhere to the REST architecture.
 - A self-motivated and responsible individual with excellent communication skills and the ability to take charge and lead discussions when needed.
-

Technical Skills

Programming languages: JavaScript/ES6, TypeScript, Python, Java

Web-Development: HTML5, CSS3, React, GraphQL, JQuery, SASS, Webpack, Babel, Redux, Node.js

Backend: Flask, SQL, MySQL

Version Control and Testing: Git, Jest, React Testing Library

Work Experiences

Walmart, Seattle, WA

Mar 2023 - Present

React Developer

The Walmart Creator Program is Walmart's influencer commerce platform, enabling content creators to build personalized storefronts, curate shoppable product collections, and generate affiliate links tied to their content across social media. The platform bridges Walmart's product catalog with creator-driven commerce, allowing influencers to monetize their audiences while driving traffic and sales directly to Walmart. As part of the engineering team, contributed to building and scaling the platform from MVP through General Availability, supporting 800K+ creators and 50K+ storefronts.

Responsibilities:

- Co-led architecture redesign of the Storefront publishing pipeline, reducing publish time from 30 minutes to near-instant by routing Walmart's main site to fetch directly from an internal API.
- Designed the system architecture and full-stack implementation of the Marty AI Chatbot, leveraging LangChain agents and a Webpack Module Federation MFE for the creator-facing UI.
- Built and optimized the Affiliate Link Generation API across storefronts, collections, and shoppable posts, cutting response time from 300ms to near-zero with robust error handling.
- Delivered full-stack features (Next.js frontend, Node.js/Directus backend) across MVP and GA launches for a platform serving 800K+ creators and 50K+ storefronts.
- Leveraged Next.js SSR for performance optimization, reducing initial page load times and improving SEO visibility.
- Implemented unit tests using Jest and React Testing Library and collaborated cross-functionally in an Agile/Scrum environment.

Artly Coffee, Seattle, WA

July 2021 - Mar 2023

Front-End Developer

Artly Coffee is a game-changing start-up coffee shop chain that uses cutting-edge technology to brew the most delicious and expertly crafted coffee, all with the help of sleek, state-of-the-art robots. The robotic baristas are trained by some of the world's top coffee experts, using advanced machine learning techniques, ensuring that every cup is a perfect, satisfying experience.

Responsibilities:

- Developed and maintained a sleek and intuitive web app for taking orders using React and TypeScript, leveraging the static typing capabilities of TypeScript to ensure high-quality and bug-free code.
- Leveraged Axios and APIs to seamlessly fetch data from the backend and integrate the front-end and backend of the app, allowing for a smooth and user-friendly experience.
- Utilized React function components, HOCs and custom hooks to efficiently reuse logic and implement the new feature of the project, improving code reusability
- Utilized Redux to manage the application's global state and store user information across the application, enhancing data accessibility.
- Implemented React Router for dynamic routing, allowing for seamless navigation
- Utilized the agile scrum development methodology to plan and execute projects, collaborating with team members and regularly reassessing goals and priorities.

Zenoti, Remote in (Bellevue, WA)

March 2020 - June 2021

Software Engineer

Zenoti provides an all-in-one, cloud-based software solution for the spa, salon, and med spa industry. Zenoti allows users to seamlessly manage every aspect of the business in a comprehensive mobile solution: online appointment bookings, POS, CRM, employee management, inventory management, built-in marketing programs, and more.

Responsibilities:

- Developed dashboards and charts using React and rechart library to display, filter, and analyze data.
- Implemented React Router for dynamic routing between dashboard tabs, and utilized the React component lifecycle to optimize updates to the Virtual DOM.
- Transformed raw data, fetch from backend APIs, into engaging, interactive charts with Rechart. Transform complex data sets into stunning, interactive charts that tell a clear and compelling story.
- Developed and implemented comprehensive unit tests using Jest and react testing library to ensure code quality and functionality.
- Demonstrated strong collaboration and communication skills, by working in an agile environment and actively participated in scrum meetings to drive project success.

E-Khmer, Remote in (Phnom penh, Cambodia)

April 2018 - February 2020

Software Engineer

Project: CDRI

E-Khmer is a company that provides web design and consulting services to clients in a variety of industries. The company can be flexible in all situations to solve problems according to customer needs to achieve success in the business of customers. The CDRI website project was a web project to design a website for a research institute in Cambodia. The website boasts a sleek and intuitive front-end interface that allows the admin to effortlessly input and manage research data in their databases. Meanwhile, the public-facing component showcases their cutting-edge research to the world.

Responsibilities:

- Developed and maintained a modern and user-friendly web application that is compatible with various browsers using React, Javascript, HTML, CSS, Redux, Webpack, and Babel.
- Built reusable UI components for future use in front-end projects.
- Developed a robust front-end interface for seamless data input and management using CRUD operations.
- Employed npm to set up and maintain dependencies of external libraries and development tools.
- Leveraged Git for efficient and reliable version control management, ensuring smooth collaboration and preventing costly conflicts in code commits

Education

University of Washington, Major GPA: 3.8 Annual Dean's List
Bachelor of Science major in Computer Science

Seattle, WA
