SUMMARY

Software Engineer with 3+ years of full stack web development at Walmart on Walmart Creator, a platform serving 800K+ creators and 50K+ storefronts, including an AI chatbot built with LangChain agents. Completing an MS in Technology Innovation at the University of Washington.

EDUCATION

Master of Science, Technology Innovation — University of Washington, Seattle Expected Mar 2027

Bachelor of Science, Computer Science — University of Washington Jun 2022
Major GPA 3.8; Annual Dean's List

EXPERIENCE

Software Engineer III, Walmart (Contract) Mar 2023 – Aug 2026

- Co-led an architecture redesign of Walmart Creator storefront publishing that cut publish time from 30 minutes to near-instant.
- Built the affiliate link generation API, reducing response time from 300ms to near-zero.
- Designed the architecture of Marty, an AI chatbot for creator Q&A; built its Module Federation-based UI and implemented LangChain agents.
- Redesigned data models and streamlined API calls, improving performance by 50%.
- Developed and maintained a Next.js, React and TypeScript web app, using server-side rendering and SEO optimization to reduce initial page load times.
- Developed more than 10 reusable React components, and used functional components, HOCs and custom hooks to reuse logic and implement new features.
- Used Directus to architect backend data models and APIs.
- Wrote unit tests with Jest and React Testing Library, working in agile scrum.

PROJECTS

Project Thoth April 2026
T-Mobile-sponsored hackathon at UW; placed 3rd

- AI knowledge management system where an LLM-driven agent interviews subject matter experts; grounded Q&A via pgvector HNSW search. Placed 3rd of 15+ teams.
- FastAPI, Next.js, PostgreSQL, LangChain and Claude Haiku/Sonnet; single LLM call per query and provider credentials encrypted at rest with pgcrypto.

Wizard Chess May-June 2026
TECHIN 515 Hardware/Software Lab II, UW

- Physical chess board that moves pieces autonomously with an electromagnet on a CoreXY gantry; built the motor firmware, control firmware, PCB and mechanical design in a team of 3.
- Raspberry Pi Pico validates moves, plans paths and drives the stepper motors and electromagnet over UART; C++ with PlatformIO, custom motor PCB in KiCad.

SKILLS

Languages: TypeScript, JavaScript, Python, Java, C++, SQL
Frontend: React, Next.js, Redux, Module Federation, Tailwind CSS, Material UI, HTML5, CSS3
Backend and data: Node.js, FastAPI, Flask, REST APIs, GraphQL, PostgreSQL, Supabase, Directus, MySQL
AI and ML: LangChain, Claude API, pgvector, PyTorch, Whisper
Tools: Git, Docker, GitHub Actions, Jest, React Testing Library, Vercel
